

# Top Staircase Trends for 2019

## Box Newels

Round newels, move over — there's a new style in town!

Box newels have been the biggest trend in stairways for the past five years. Considered the “anchor” of the stair system, box newels work well with a variety of balusters to create unique looks in the home. Box newels are especially fitting in Arts and Crafts and Mission/Minimalistic style homes. Whether a small box newel for tight spaces or a larger box newel for a grand entryway, the appearance of box newels is a trend that's here to stay.

When working with **Arrowhead Stairs & Trim**, you can also customize your box newels to the perfect style for your home. Want your last name initial inlaid in the face of the box newel? That can be done. Looking to have a wooden box newel created in the same species of wood as your flooring? Yes, that can be done too. Want a very personalized box newel made out of the barn wood found on your grandparent's property? If you can dream it, there's a way to make it happen.

## Square Balusters

If you're not using an iron baluster these days, then you're most likely incorporating a square baluster into your stair system.

The most popular look in square balusters in the marketplace today is a beautifully primed square baluster that pairs perfectly with painted risers.

## Stainless Steel Cable and Tube

You may have seen this before on exterior decks, but interior stair systems are now also trending toward the use of stainless steel cable and tubing.

Popular for lofts and condos in city settings, stainless steel cable has a sleek, modern appeal. The thin cable creates the aura of clean lines installed horizontally while also maximizing viewing through the stair system. Matched up with black metal or classic wooden newels and these stainless steel stair system elements create a fresh, simple look.

## Linear Metal Panels

The newest look in modern stairway design. This collection consists of pre-assembled panels resulting in a very simplified installation process for open tread stairs, kneewall stairs, and level run applications.

The easy-to-install Linear Panels can be pre-built to fit, and only need a few screw holes drilled for installation. You can also forget the glue, sanding, code issues, drilling of baluster holes, marking and cutting to fit. These trendy panels come ready to install.

Once complete, this appealing stair system features metal panels, newels, and posts complemented by wooden handrails, handrail fitting, and stair treads.
